

SWS 8 & 8Xi

PRODUCT RELEASE

**EARTHQUAKE
SOUND**
Sound That Will Move You.

SHALLOW WOOFER SYSTEM

Earthquake Sound is proud to present one of the most talked about products in BMW blogs, the SWS-8. Originally designed to replace BMW factory speakers, the SWS-8 has undergone major improvements. The slim SWS-8 uses aluminum flat wire in order to achieve its light weight and faster response.

SWS-8
MOUNTING DEPTH: 2-1/8"

	MSRP
SWS-8	\$175
SWS-8Xi	\$199

ATTENTION BMW OWNERS:

Our most popular size is the SWS-8 due to the fact that it is designed to replace the BMW factory speakers that are located under the front seats. There is no modification required. Simply remove the seats and replace the factory woofers with the exact-fitting SWS-8 woofers to improve the sound quality of your mobile audio.

Since many OEM amplifiers are now coming with 2W impedance, Earthquake Sound released the SWS-8Xi that has a 2Ω voice coil.

In addition to BMW cars, the SWS series are the perfect BASS solution for any car. Many factories are now using woofers in small areas. To improve your bass, simply replace the factory speakers with the SWS woofers.

SWS-8XI FEATURES

The SWS-8Xi's 2Ω impedance allows you to have much a stronger subwoofer, increasing your sound level by two fold.

- Low profile mount for placement anywhere
- 2-Ohm impedance
- Inverted style cone design for maximum excursion in shallow mount applications
- High temperature voice with heat-sink attachment
- NOMEX/ROMEX spider assembly
- Protected by 3 U.S. patents
- Aluminum Bobbin
